- Current Yield is the annual interest earned on the underlying bonds divided by the market price of the underlying portfolio of bonds. The figure is not the dividend yield received by the investors and is subject to change depending on the underlying portfolio of bonds.
- Yield to Worst is the lowest potential yield that can be received on a bond without the issuer actually defaulting. The yield to worst is calculated by making the worst-case scenario assumptions on the issue.
- Yield to Maturity is a concept used to determine the rate of return an investor will receive if a long-term, interest-bearing investment, such as a bond, is held to its maturity date. Please note that this is not the return or dividend to be received by investors in the fund.
